

PHASE 1 – BRAINSTORMING & IDEATION

Project: LegalEase – AI-Powered Legal Document Generator

1. Project Idea

LegalEase is an AI-powered legal document generator designed to simplify the creation of legal documents. It uses Generative AI to create customizable and editable documents based on user-provided information.

2. Problem Identification

Creating formal legal documents can require knowledge of legal terminology, document structure, formatting, and clauses. LegalEase addresses this accessibility problem by allowing users to provide basic details and receive a structured document.

3. Proposed Solution

The proposed solution is a web-based platform where users select a document type and enter parties, terms, and effective dates. The system uses an AI model to generate the document and provides editing and export options.

4. Main Objectives

- Generate legal documents from user inputs.
- Provide an editable preview.
- Support TXT, DOCX, and PDF export.
- Maintain professional formatting and branding.
- Make document generation accessible to users without a legal background.

5. Target Use Cases

The source documentation identifies employment contracts, NDAs, lease agreements, and similar documents as use cases. Example users include startup founders, freelancers, landlords, professionals, and individuals.

6. Expected Outcome

A user-friendly application capable of taking structured legal inputs, generating AI-assisted legal content, displaying a preview, allowing edits, and exporting the result in multiple formats.

Source basis: LegalEase project documentation supplied for this task.
