

PHASE 5 – DEPLOYMENT

Project: LegalEase – AI-Powered Legal Document Generator

1. Deployment Preparation

The project is prepared for local deployment using FastAPI as the backend and Streamlit as the frontend.

2. Virtual Environment

A virtual environment is used to isolate project dependencies and maintain a consistent development environment.

3. Dependencies

Dependencies are installed using requirements.txt with `pip install -r requirements.txt`.

4. Environment Variables

A .env file is used to securely store the Gemini API key.

5. Backend Launch

The FastAPI backend is launched using Uvicorn.

6. Frontend Launch

The Streamlit application is launched to provide the LegalEase user interface.

7. Future Deployment Options

The source documentation mentions Render, Railway, Deta, Streamlit Community Cloud, Fly.io, and VPS as possible deployment options.

Source basis: LegalEase project documentation supplied for this task.
