

PHASE 6 – TESTING & VERIFICATION

Project: LegalEase – AI-Powered Legal Document Generator

1. Testing Objective

Testing verifies that the LegalEase application works end-to-end, from user input through AI generation to document export.

2. Input Testing

Test document type, parties, terms, and effective date with different input combinations.

3. AI Generation Testing

Press Generate Document and verify that AI-generated legal content is returned from Gemini.

4. Preview Testing

Verify that the generated content is displayed correctly in the HTML preview.

5. Editing Testing

Use the Edit Document option and verify that generated text can be modified.

6. Download Testing

Verify TXT, DOCX, and PDF downloads and confirm that the exported files contain the expected generated content.

7. Formatting Verification

Check logo placement, footer, headings, bullet points, terms tables, and overall document layout.

8. End-to-End Verification

The final verification checks the complete workflow: input → generation → preview → editing → download. The source documentation specifically requires testing Gemini integration under different input combinations.

Source basis: LegalEase project documentation supplied for this task.
